### Description

Expand your desktop to external DisplayPort monitor via USB-C or Thunderbolt 3 connector. This cable adapter supports 4K Ultra HD video with resolution up to 3840 x 2160 px and stereo sound. The cable adapter is suitable for use with all notebooks equipped with a USB-C connector which supports video transfer or with a Thunderbolt 3 connector. The USB-C and Thunderbolt 3 connectors have many benefits. They are smaller and symmetrical, which makes them easy to connect because you do not have to care about connector orientation. The cable adapter is the excellent choice for designers, graphic designers, gamers, and other users working with more than one screen simultaneously. Using the "Extend" and "Mirror" modes you can work for example with applications on two monitors, or you can work on the first screen and search for information on the Internet on the second screen, you can compare several documents simultaneously without constant switching among the open windows, you can display panoramic images on two screens without the need to have another computer etc. Using is very simple, just plug the cable adapter into the USB-C or Thunderbolt 3 port on your computer, connect it with a display device via Display Port connector and you can immediately start using. Driver installation is automatic from the system.
